Spider Habitats

Spiders can live almost anywhere:
in holes, water, grass and houses.

They can grow to be enormous but
tend to be quite small (a few
inches) in the UK.

Wonderful Webs

- Not all spiders build webs.
- Mother spiders will spin silk around their eggs to protect them.
- Spiders use Drag Lines to stop them from falling when building a web.
- Spider silk is stronger than steel.

Each web is totally unique.

Types of Spider

- Spiders are not insects as they have 8 legs and insects have 6.
- Spiders come in all shapes and sizes.
- The brighter the spider, the more likely it is to be poisonous.
- Here are a few different types of spider:

Goliath Bird Eater

One of the largest spiders in the world, [NEXT](#)
it really does eat birds!
It can grow to be 30cm!

Eating Habits

- Not all spiders use their webs for catching prey.
- Poisonous spiders catch and bite their prey.
- Spiders like to eat anything from insects to birds or even each other!
- Water spiders catch tiny fish for dinner.
- Spiders help us by keeping pests and insect levels down.

The End
